Zinc solution chelated with ortho-ortho EDDHA, designed for use in most soil applied fertilizers.

FEATURES AND BENEFITS

• Increases length of time zinc is available to the plant.
• Allows zinc, phosphorus, and other micronutrients already present in the soil more available for plant uptake.
• Enhanced nutrient availability increases speed of emergence, overall plant health, and ultimately yield.

ACTIVE INGREDIENTS

• Total Nitrogen (N)...................................................................................................... 4%
  4.0% Ammoniacal Nitrogen (N)
• Zinc (Zn)..................................................................................................................... 4.5%
  4.5% Chelated Zinc (Zn)
Derived from: aqua ammonia, zinc EDDHA and zinc EDTA.

APPLICATION DIRECTIONS

For use as or with an in-furrow starter fertilizer or postemergence to prevent or correct zinc deficiency

Apply 1-4 qt/A (1-2 qt/A is most common) alone or added to an existing liquid phosphorus-based in-furrow starter fertilizer program.

COMPATIBILITY

Levesol Zn can be blended with most primary, secondary, or micronutrients as well as crop protection products. Add Levesol Zn to liquid fertilizer and agitate lightly until mixed. In the absence of published information, check compatibility by performing a jar test prior to mixing.

IMPROVED HANDLING CHARACTERISTICS

• Levesol Zn is a new formulation that contains an improved defoamer system to reduce foam formation when mixing with starter fertilizers.
• Starter fertilizers vary in their quality and level of impurities that can lead to precipitate formation. Levesol Zn contains a new compatibility aid to improve the compatibility and longevity of compatibility with a wider array of starter fertilizer options.

CROPS

Soybeans | Dry Beans | Sugarbeets | Wheat | Barley | Sorghum | Corn | Sunflowers

PACKAGE SIZE | 2x2.5 gal | 250 gal
